PT   New kit comprising a multivalent, multi-specific binding protein and a
PT   carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Claim 10; Fig 29; 87pp; English.
XX
CC   The present sequence is the protein sequence of a hMN14 diabody,
CC   designated hMN14-scFv-L5. Humanised monoclonal antibody hMN14 binds
CC   specifically to carcinoembryonic antigen (CEA). hMN14-scFv-L5 comprises:
CC   hMN14 VH linked to 679 Vk via a peptide linker (enables the secreted
CC   polypeptide to dimerise into a diabody, forming 2 sites for HSG); a pelB
CC   leader signal peptide (facilitates transport of the polypeptide into the
CC   periplasmic space of Escherichia coli); and 6 His residues (allows
CC   purification by IMAC). The invention provides a bispecific diabody
CC   comprising a histamine-succinyl-glycyl (HSG) binding site and a CEA
CC   binding site. The CEA binding site may comprise the VH and Vk
CC   polypeptides of hMN14 MAb. These diabodies are produced via recombinant
CC   DNA technology and create a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

CC   The present sequence is the protein sequence for polypeptide #1 of a
CC   novel bispecific diabody comprising the VH region of monoclonal antibody
CC   679 and the Vk region of monoclonal antibody hMN14. Mouse antibody 679
CC   binds with high affinity to molecules containing the moiety histamine-
CC   succinyl-glycyl (HSG). Humanised antibody hMN14 binds specifically to
CC   carcinoembryonic antigen. The bispecific diabody can be produced using
CC   recombinant DNA methods, e.g. in Escherichia coli host cells. It provides
CC   a novel affinity enhancement system that shows specific affinity for HSG
CC   and CEA. Such bispecific diabodies pre-target CEA positive tumours for
CC   subsequent specific delivery of therapeutic radioisotopes carried by HSG-
CC   carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

PT   Polyvalent protein complex for treating B-cell malignancy, Anthrax
PT   bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT   chains having immunoglobulin variable domains, to form complex having
PT   three antigen binding sites.
XX
PS   Example 2; SEQ ID NO 12; 148pp; English.
XX
CC   The invention relates to a polyvalent protein complex (PPC) (I),
CC   comprising a first and second polypeptide chains having immunoglobulin
CC   variable domains, where the first and second polypeptide chains form a
CC   complex having three antigen binding sites, and where each binding site
CC   comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC   useful in pretargeting method of treating or diagnosing, or treating and
CC   diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC   lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC   malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC   also useful for diagnosing a non-neoplastic disease or disorder where the
CC   disease or disorder is caused by a fungus, a virus, a bacterium, a
CC   mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC   infarction, ischemic heart disease, atherosclerotic plaques, graft
CC   rejection, Alzheimer's disease or inflammation caused by accretion of
CC   activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC   site of inflammation (caused by infectious agent). (I) is useful in
CC   antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
CC   molecule, and immunostaining technique. This sequence corresponds to the
CC   chimeric hBS14 polypeptide 2 containing heavy and light chain variable
CC   regions.

CC complex having three antigen binding sites, and where each binding site
CC comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC useful in pretargeting method of treating or diagnosing, or treating and
CC diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC also useful for diagnosing a non-neoplastic disease or disorder where the
CC disease or disorder is caused by a fungus, a virus, a bacterium, a
CC mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC infarction, ischemic heart disease, atherosclerotic plaques, graft
CC rejection, Alzheimer's disease or inflammation caused by accretion of
CC activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC site of inflammation (caused by infectious agent). (I) is useful in
CC antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
CC molecule, and immunostaining technique. This sequence corresponds to the
CC chimeric BS14HP polypeptide 1 containing heavy and light chain variable
CC regions. The encoded polypeptide is designated alpha-factor-h679Vh-GGGGS-
CC hMN-14Vk-LEGGGS-hMN-14Vh-6-His where the hMN14 is from a humanized
CC antibody that binds specifically to the carcinoembryonic antigen and the
CC h679 is a monoclonal antibody that binds the tri-peptide moiety histamine
CC -succinyl-glycyl (HSG).

PS Claim 48; Fig 9A-B; 43pp; English.
XX
CC The present invention describes a multivalent, multi-specific binding
CC protein (I) comprising a first binding site having an affinity towards a

CC hapten group and a second and a third binding sites each having affinity
CC towards a target antigen, which may be the same or a different target
CC antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC useful for delivering a diagnostic agent, a therapeutic agent, or its
CC combination to a target, which involves administering (I) to a subject,
CC waiting for a sufficient amount of time for an amount of the non-binding
CC protein to clear the subject's blood stream, and administering to the
CC subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC agent, or its combination, that binds to a binding site of the binding
CC protein. (I) is also useful for detecting or treating a human disorder,
CC preferably cancer, autoimmune diseases, infectious diseases,
CC cardiovascular diseases and inflammatory diseases. The present sequence
CC represents the TS1 VL chain amino acid sequence, which is used in the
CC exemplification of the present invention

PT New chimeric molecule from humanized antibody against carcinoembryonic
PT antigen and having signaling molecules of T cells and other effector
PT cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS Disclosure; Page 7-8; 20pp; English.
XX
CC The invention relates to a chimaeric molecule comprising the
CC carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC which the cysteine residues have been mutated, with the IgTCR molecule
CC occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC NK (not defined) or other effector cells are useful in treating patients
CC with cancers expressing the CEA antigen, together with other or with
CC heterologous constructs to engage additional stimulatory and functional
CC properties of the effector cells to enhance the anti-tumour therapeutic
CC efficacy. The cancer disorder includes colorectal, breast and lung
CC cancers. The present sequence represents the chimaeric molecule of the
CC invention

PT New chimeric molecule useful in treating patients with disorders, such as
PT melanoma, neuroendocrine disorders, prostate and small cell lung cancer
PT comprises GD3 and/or PSMA binding domains of antibody.
XX
PS Disclosure; Page 7-8; 35pp; English.
XX
CC The invention relates to a chimaeric molecule comprising the GD3
CC (ganglioside antigen) binding domain of antibody MB3.6, with any of 3
CC variable gene sequences, or the PSMA (prostate-specific membrane antigen)
CC binding domain of antibody 3D8, 4D4 and 3E11, with variable gene
CC sequences, the zeta signalling chain of the T cell receptor and an
CC intervening CD8alpha hinge in which cysteine residues have been mutated.
CC The chimaeric molecules expressed in T cells or NK cells or other
CC effector cells are useful in treating patients with cancers expressing

CC the GD3 (MB3.6 derivatives) or PSMA antigen (3D8, 4D4, 3E11 derivatives),
CC and/or together with each other or with heterologous constructs to engage
CC additional stimulatory and functional properties of the effector cells to
CC enhance the antitumour therapeutic efficacy (claimed). They are
CC particularly useful in disorders including melanoma, neuroendocrine
CC tumours and prostate and small cell lung cancer. The present sequence is
CC a hMN14 antibody (specific to CEA antigen) in a fusion protein with the
CC modified CD8alpha hinge and the T-cell receptor zeta chain (IgTCR)
CC encoded by a retroviral vector. The hMN14 antibody coding region is
CC replaced with the MB3.6, 3D8, 4D4 or 3E11 genes of the invention.

PT Composition useful as cancer vaccine, comprises polypeptide having
PT antibody heavy chain fused to antibody light chain, or multivalent
PT antibody having two polypeptides with antibody heavy chain fused to
PT antibody light chain.
XX
PS Disclosure; SEQ ID NO 3; 101pp; English.
XX
CC The invention describes a composition (I) comprising: (a) a polypeptide
CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain; or (b) a multivalent antibody comprising at least
CC two polypeptides, where each of the polypeptides comprises at least one
CC antibody heavy chain fused to at least one antibody light chain. Also
CC described: (1) a composition (II) comprising a nucleic acid comprising at
CC least one antibody heavy chain gene and at least one antibody light chain
CC gene, where the nucleic acid encodes a polypeptide comprising at least
CC one antibody heavy chain fused to at least one antibody light chain; (2)
CC a method (M1) of binding an antigen, involves providing a polypeptide
CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain, and contacting the polypeptide with a sample having
CC an antigen under conditions such that the polypeptide binds to the
CC antigen; (3) a method (M2), which involves providing a vector comprising
CC a bicistronic expression construct comprising genes encoding an antibody
CC heavy chain gene and an antibody light chain gene, and altering the
CC nucleic acid sequence of a splice acceptor sequence or a splice donor
CC sequence in the antibody light chain gene or the antibody heavy chain
CC gene under conditions such that splicing is prevented at the splice
CC acceptor sequence or donor sequence; (4) a nucleic acid sequence produced
CC by (M2); (5) a vector (III) comprising a modified antibody heavy or light
CC gene, where modification eliminates a splice donor or acceptor sequence
CC in antibody heavy or light chain gene; and (6) a host cell comprising
CC (III). (I) is useful in in vitro binding assays for identifying antigens
CC in a mixture or determining the presence or absence of expression of a
CC particular protein. (I) is also useful as vaccine for treating cancer and
CC infections caused by pathogens e.g. virus or bacteria. The present
CC sequence represents an exemplary antibody fusion protein from the present
CC invention.

PT Novel antibody specific for tumor necrosis factor-related apoptosis-
PT inducing ligand, useful for inhibiting cell proliferation in cancer.
XX
PS Example 16; Page 201; 229pp; English.
XX
CC The invention describes a novel antibody which recognizes a tumour
CC necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL) receptor
CC DR5 (located on chromosome 8p21-22). The antibody has apoptosis-inducing

CC activity to a cell expressing DR5 in vivo. It is also useful for
CC preparing a therapeutic for selective apoptosis of abnormal or
CC dysregulated cells, and for inhibiting cell proliferation in a cell,
CC preferably a human breast, ovary, colon, haematopoietic, prostate,
CC lymphatic, lung, glioma or liver cancer cell. A therapeutic agent may
CC also be administered e.g. paclitaxel, taxol or cycloheximide. The
CC antibody is used to treat an autoimmune disease, systemic lupus
CC erythematosus, Hashimoto's disease, rheumatoid arthritis, graft-versus-
CC host disease, Sjogren's syndrome, Chron's disease, pernicious anaemia,
CC Addison disease, scleroderma, Goodpasture's syndrome, autoimmune

PT Treating or preventing immunoglobulin-mediated reperfusion or ischemic
PT injury resulting from e.g. angioplasty or bypass surgery, by
PT administering an inhibitor of pathogenic immunoglobulin and ischemic
PT antigen interaction.
XX
PS Claim 52; Page 74; 77pp; English.
XX
CC The invention provides a method of treating or preventing immunoglobulin-
CC mediated reperfusion or ischemic injury in a subject. The method involves
CC administering an inhibitor of an interaction between a pathogenic
CC immunoglobulin, and an ischemic-specific antigen or a component of the
CC complement pathway. The method is useful for treating or preventing
CC immunoglobulin-mediated reperfusion or ischemic injury, in particular,
CC injury that results following a naturally occurring episode, a surgical
CC procedure (e.g. angioplasty, stenting procedure, atherectomy or bypass
CC surgery), or in an injury that occurs in a cardiovascular tissue. The
CC method is also useful for treating or preventing, in a subject, tissue
CC damage following reperfusion caused by a pathogenic immunoglobulin, e.g.
CC pathogenic IgMs. The present sequence represents the complementarity
CC determining region (CDR1) of a light chain variable region of 22A5 IgM, a
CC pathogenic immunoglobulin

PT   Inducing apoptosis and inhibiting proliferation of target cells
PT   expressing DR5, by contacting the target cell with an antibody that binds
PT   TNF-related apoptosis-inducing ligand receptor DR5 and with therapeutic
PT   agents.
XX
PS   Example 16; SEQ ID NO 28; 274pp; English.
XX
CC   The invention relates to a method of selectively inducing apoptosis in
CC   and inhibiting (M1) proliferation of target cells expressing DR5,
CC   comprising contacting the cell with an antibody that specifically binds
CC   tumor necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL)
CC   receptor DR5, where the antibody, in its soluble form, has in vivo and in
CC   vitro apoptosis-inducing activity in the cell expressing DR5, and
CC   contacting the cell with one or more therapeutic agents. M1 is useful for
CC   inducing apoptosis in target cell and inhibiting proliferation of target
CC   cell expressing DR5, where the target cell is an abnormally proliferating
CC   synovial cells (e.g. rheumatoid arthritis synovial cell), activated
CC   immune cell (e.g. activated lymphocyte), neutrophil, or virally infected
CC   cell. M2 is useful for treating a subject having inflammatory and
CC   autoimmune diseases. The inflammatory or autoimmune disease are selected
CC   from systemic lupus erythematosus, Hashimoto's disease, rheumatoid
CC   arthritis, graft-versus-host disease, Sjogren's syndrome, pernicious
CC   anemia, Addison disease, scleroderma, Goodpasture's syndrome, Crohn's
CC   disease, autoimmune hemolytic anemia, sterility, myasthenia gravis,
CC   multiple sclerosis, Basedow's disease, thrombotic, thrombocytopenia,
CC   thrombopenia purpura, insulin dependent diabetes mellitus, allergy,
CC   asthma, atopic disease, arteriosclerosis, myocarditis, cardiomyopathy,
CC   glomerular nephritis, and hypoplastic anemia. This sequence represents a
CC   protein used in the method of the invention.

PT   Novel bispecific antibody substituting for function of cofactor that
PT   enhances enzyme reaction, and recognizing both enzyme and substrates of
PT   enzyme, useful for treating hemophilia A.
XX
PS   Disclosure; SEQ ID NO 206; 69pp; Japanese.
XX
CC   This invention describes a novel bispecific antibody which can act as a
CC   cofactor to enhance an enzyme reaction and can recognize the enzyme and
CC   the enzyme substrate. The antibody specifically binds to blood
CC   coagulation factor VIII. The invention also describes a composition
CC   comprising the antibody and a carrier, a kit useful in preventing and/or
CC   treating bleeding associated with a disorder or from a disease caused by
CC   bleeding. The composition includes blood coagulation factor VIII. The
CC   antibody of the invention can be a blood-coagulation fibrinolysis related
CC   factor including blood-coagulation factor VIII, blood coagulation factor
CC   X, or blood-coagulation factor IX. The antibody comprises a complementary
CC   determining region (CDR) of anti-blood-coagulation factor IX/IXa factor
CC   antibody. The novel antibody or composition is useful for preventing
```

CC and/or treating a disease accompanying bleeding, or the disease resulting
CC from bleeding, where the disease accompanying bleeding or the disease
CC resulting from bleeding develops and/or progresses by an active reduction
CC or deletion of the blood coagulation factor VIII. The disease the
CC develops and/or progresses by an active reduction or deletion of the
CC blood coagulation factor VIII and/or activation blood coagulation factor
CC VIII, is hemophilia A or von Willebrand disease, where the hemophilia is
CC an acquired hemophilia A. This sequence represents a fragment of the
CC antibody described in the method of the invention. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT Treating an autoimmune disease comprises providing an
PT antibody/autoantigen construct containing an autoantigen linked to an
PT antibody to a receptor of an antigen presenting cell and administering
PT the construct to a subject.
XX
PS Example 9; Fig 8; 71pp; English.
XX
CC This invention relates to the novel treatment of an autoimmune disease
CC that utilises an antibody/ autoantigen construct. Specifically, it refers
CC to a peptide autoantigen that is linked to an antibody raised against an
CC antigen presenting cell (APC) receptor. The present invention describes a
CC method for treating diabetes mellitus by inducing an immune tolerance to
CC an autoantigen, which can be chosen from glutamic acid decarboxylase
CC (GAD), insulin or a heat shock protein (HSP), as well as epitopes derived
CC from each thereof or beta cell antigens that are linked to an APC

```
CC   receptor antibody. In particular, the antibody recognises a receptor
CC   chosen from DC-SIGNR, MHC, toll receptor or mannose receptor amongst
CC   others, which is expressed on the surface of the APC. The antibody/
CC   autoantigen construct then works to interfere with the interaction
CC   between the APC and immune cells such as autoreactive T cells, and hence
CC   inhibits T-cell proliferation. Accordingly, such compositions exhibit
CC   antidiabetic and immunosuppressive activities and can be used in the
CC   development of vaccines. Note that the single chain antibodies (scFVs)
CC   used in this specification contain both variable light and heavy chain
CC   regions connected by a linker, their short length makes these antibody
CC   fragments particularly suitable for antigen linkage, and the capacity for
CC   binding to the receptor is preserved. This polypeptide sequence is a
CC   light chain murine anti-human L-SIGN (hL-SIGN) antibody protein of the
CC   invention.

PT Humanized monoclonal antibodies against Shiga toxins, useful for
PT protection against enterohemorrhagic Escherichia coli or other Shiga
PT toxin producing bacteria.
XX
PS Claim 5; Fig 3; 75pp; English.
XX
CC The invention relates to humanised monoclonal antibodies (MAb) against
CC Shiga toxins. The humanised MAb that binds to Shiga toxin comprises a
CC constant and a variable region, where: (a) the constant region contains
CC at least part of a human immunoglobulin (Ig) constant region; and (b) the
CC variable region contains at least part of a non-human Ig variable region.
CC Host cells transformed with vectors encoding a humanised MAb against
CC Shiga toxin type 2 is useful for treating a patient with an infection
CC caused by enterohemorrhagic Escherichia coli (EHEC) or other Shiga toxin
CC producing bacteria. The humanised MAb can also be used to reduce illness
CC caused by EHEC or other Shiga toxin producing bacteria. EHEC are
CC associated with food-borne outbreaks of bloody diarrhoea (hemorrhagic
CC colitis) and the hemolytic uremic syndrome. In particular, the humanised
CC MAbs ameliorate edema, thrombocytopenia and uremia associated with EHEC-
CC mediated disease. The present sequence represents an anti-STX1 light
CC chain variable region

XX
CC This invention relates to the novel treatment of an autoimmune disease
CC that utilises an antibody/ autoantigen construct. Specifically, it refers
CC to a peptide autoantigen that is linked to an antibody raised against an
CC antigen presenting cell (APC) receptor. The present invention describes a
CC method for treating diabetes mellitus by inducing an immune tolerance to
CC an autoantigen, which can be chosen from glutamic acid decarboxylase
CC (GAD), insulin or a heat shock protein (HSP), as well as epitopes derived
CC from each thereof or beta cell antigens that are linked to an APC
CC receptor antibody. In particular, the antibody recognises a receptor
CC chosen from DC-SIGNR, MHC, toll receptor or mannose receptor amongst
CC others, which is expressed on the surface of the APC. The antibody/
CC autoantigen construct then works to interfere with the interaction
CC between the APC and immune cells such as autoreactive T cells, and hence
CC inhibits T-cell proliferation. Accordingly, such compositions exhibit
CC antidiabetic and immunosuppressive activities and can be used in the
CC development of vaccines. Note that the single chain antibodies (scFVs)
CC used in this specification contain both variable light and heavy chain
CC regions connected by a linker, their short length makes these antibody
CC fragments particularly suitable for antigen linkage, and the capacity for
CC binding to the receptor is preserved. This polypeptide sequence is a
CC light chain murine anti-human DC-SIGNR (hDC-SIGNR) IgG1k antibody protein
CC of the invention.

PT Treating or preventing immunoglobulin-mediated reperfusion or ischemic
PT injury resulting from e.g. angioplasty or bypass surgery, by
PT administering an inhibitor of pathogenic immunoglobulin and ischemic
PT antigen interaction.
XX
PS Claim 50; Page 73-74; 77pp; English.
XX
CC The invention provides a method of treating or preventing immunoglobulin-
CC mediated reperfusion or ischemic injury in a subject. The method involves
CC administering an inhibitor of an interaction between a pathogenic
CC immunoglobulin, and an ischemic-specific antigen or a component of the
CC complement pathway. The method is useful for treating or preventing
CC immunoglobulin-mediated reperfusion or ischemic injury, in particular,
CC injury that results following a naturally occurring episode, a surgical
CC procedure (e.g. angioplasty, stenting procedure, atherectomy or bypass
CC surgery), or in an injury that occurs in a cardiovascular tissue. The
CC method is also useful for treating or preventing, in a subject, tissue
CC damage following reperfusion caused by a pathogenic immunoglobulin, e.g.
CC pathogenic IgMs. The present sequence represents the light chain variable
CC region of 22A5 IgM, a pathogenic immunoglobulin

RT myeloma MPC 11.";
RL Biochem. J. 171:337-347(1978).
CC -!- MISCELLANEOUS: The mature chain has 12 additional residues at its
CC amino end, due to a tandem duplication of 36 nucleotides after the
CC codon for residue 36. Residue 42 corresponds to the N-terminal
CC residue of typical kappa chains.
CC ---

CC   -!- FUNCTION: Membrane bound hemoprotein which function as an electron
CC       carrier for several membrane bound oxygenases (By similarity).
CC   -!- SUBCELLULAR LOCATION: Microsomal membrane. Bound to the
CC       cytoplasmic side of the endoplasmic reticulum (By similarity).
CC   -!- SIMILARITY: Belongs to the cytochrome b5 family.
CC   -!- SIMILARITY: Contains 1 cytochrome b5 heme-binding domain.

RT   genes of the F and HN glycoproteins.";
RL   Nucleic Acids Res. 15:2945-2958(1987).
CC   -!- FUNCTION: Attaches the virus to sialic acid-containing cell
CC       receptors and thereby initiating infection. Binding of HN protein
CC       to the receptor induces a conformational change that allows the F
CC       protein to trigger virion/cell membranes fusion (By similarity).
CC   -!- FUNCTION: Neuraminidase activity ensures the efficient spread of
CC       the virus by dissociating the mature virions from the neuraminic
CC       acid containing glycoproteins (By similarity).
CC   -!- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-,
CC       alpha-(2->8)- glycosidic linkages of terminal sialic residues in
CC       oligosaccharides, glycoproteins, glycolipids, colominic acid and
CC       synthetic substrates.
CC   -!- SUBCELLULAR LOCATION: Type II membrane protein.
CC   -!- SIMILARITY: Belongs to the paramyxoviruses hemagglutinin-
CC       neuraminidase family.

CC   -!- FUNCTION: Bifunctional, exhibiting both a catalase and broad-
CC       spectrum peroxidase activities.
CC   -!- CATALYTIC ACTIVITY: 2 H(2)O(2) = O(2) + 2 H(2)O.
CC   -!- COFACTOR: Binds 1 heme B (iron-protoporphyrin IX) group per dimer
CC       (By similarity).
CC   -!- INDUCTION: By hydrogen peroxide.
CC   -!- SIMILARITY: Belongs to the peroxidase family. Bacterial
CC       peroxidase/catalase subfamily.

CC   -!- FUNCTION: Necessary for efficient RNA polymerase transcription
CC       elongation past template-encoded arresting sites. The arresting
CC       sites in DNA have the property of trapping a certain fraction of
CC       elongating RNA polymerases that pass through, resulting in locked
CC       ternary complexes. Cleavage of the nascent transcript by cleavage
CC       factors such as greA or greB allows the resumption of elongation
CC       from the new 3'terminus. GreA releases sequences of 2 to 3
CC       nucleotides (By similarity).
CC   -!- SIMILARITY: Belongs to the greA/greB family.
CC   ----------------------------------------------------------------------

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 5; Page 38; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence is a murine derived CDR region which corresponds
CC to CDR 2 in the light chain of the humanised MAb. See AAR97313-97333

PT   sample.
XX
PS   Claim 21; Page 16; 89pp; German.
XX
CC   This invention describes a novel method for detecting, in a mammal,
CC   infection by an acid-resistant microorganism (A) which comprises reacting
CC   a fecal sample with: (i) a receptor (R) such that a complex is formed
CC   with an antigen (Ag) of (A); or (ii) two different R so that a three-part
CC   complex is formed with Ag, and the formation of a complex detected. R are
CC   specific for an Ag which, after passage through the intestines, at least
CC   in some mammals, retains a native (or corresponding) structure against
CC   which the mammal produces antibodies (when immunized or infected with
CC   (A), or its extracts, lysates or derived proteins (or fragments) or
CC   synthetic peptides). The products of the invention have antibacterial
CC   activity. The method is used to diagnose infection by Helicobacter,
CC   Campylobacter or Mycobacterium, particularly H. pylori (most preferred),
CC   H. hepatica, C. jejuni and M. tuberculosis, and also to monitor the
CC   progress of treatment. Receptors, particularly antibodies, directed
CC   against Ag can be used therapeutically for treatment of infections. The
CC   method requires only one R to provide a reasonably secure diagnosis
CC   (although use of two R improves sensitivity), so is relatively
CC   inexpensive and more easily standardized. Also it is direct, non-
CC   invasive, suitable for automation and may indicate the stage of an
CC   infection. This sequence represents a complementarity determining region
CC   (CDR) from an antibody generated against a Helicobacter pylori antigen
CC   (catalase or beta-urease) which is used to illustrate the method of the
CC   invention

PT   Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT   comprises administering, either concurrently or sequentially, Class III
PT   anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT   therapeutic agent(s).
XX
PS   Claim 6; SEQ ID NO 21; 88pp; English.
XX
CC   The invention relates to a method of treating a non-medullary thyroid
CC   carcinoma or treating medullary thyroid carcinoma involves administering
CC   to a subject, either concurrently or sequentially, a Class III anti-CEA
CC   (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC   least one therapeutic agent. The antibody or its fragment comprises the
CC   complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC   antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC   medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC   ovarian cancer, in a subject. This sequence corresponds to the CDR2 of
CC   the murine MN-14 antibody light chain variable region and used to
CC   generate the humanised/chimeric antibody of the invention.

PT   Treating non-medullary or medullary thyroid carcinoma, involves
PT   administering to subject, either concurrently or sequentially, anti-
PT   carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS   Claim 8; Page 76; 122pp; English.
XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC   cell growth and angiogenesis. This peptide sequence is a CDR region of
CC   the humanised murine MN-14 antibody of the invention.

CC carcinoma or treating medullary thyroid carcinoma involves administering
CC to a subject, either concurrently or sequentially, a Class III anti-CEA
CC (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC least one therapeutic agent. The antibody or its fragment comprises the
CC complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC ovarian cancer, in a subject. This sequence corresponds to the murine MN-
CC 14 antibody light chain variable region.

CC This invention relates to methods for treating cancers that express
CC carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC antibodies that can be used following administration of an agent that
CC will increase antibody effector functions or following administration of
CC an amount of interferon effective to upregulate CEA expression in tumour
CC cells. The present invention describes the anti-CEA antibody as a class
CC III humanised murine monoclonal antibody that retains specificity for CEA
CC binding and is preferably an MN-14 antibody or fragment thereof.
CC Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC composition useful for the treatment of non-medullary or medullary
CC thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC carcinoma, as well as breast or lung cancer. Furthermore, it can
CC stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC cell growth and angiogenesis. This polypeptide sequence is murine MN-14
CC antibody light chain variable region protein of the invention.

PT Polymer-molded support carrying anti-hormone-disrupting-substance
PT antibody for immunological isolation, concentration or clean-up of such
PT trace hormone disruptors in samples, applicable in environmental
PT protection.
XX
PS Example 7; SEQ ID NO 4; 133pp; Japanese.
XX
CC This invention relates to a novel material useful for the isolation of
CC hormone disrupting substances (i.e. hormone disruptors). Specifically, it
CC refers to a material that comprises a polymer-molded support carrying an
CC anti-hormone disruptor antibody covalently linked via a graft chain to
CC the support, which can be used to capture and subsequently recover the
CC substances of interest. The present invention provides a method for
CC selectively and efficiently concentrating hormone disruptors including
CC alkylphenols, resin components, chlorophenols and female, male or thyroid
CC hormones from environmental samples. In particular, the method is useful
CC for the immunological isolation, concentration or clean-up of such trace
CC hormone disruptors that occur in river water, such that it is a method
CC applicable for environmental protection and the analytical sciences. This
CC polypeptide is a murine hormone disruptor antibody (scFv) protein
CC sequence of the invention.

PS   Disclosure; Page 10-11; 20pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the
CC   carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC   as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC   chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC   which the cysteine residues have been mutated, with the IgTCR molecule
CC   occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC   appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC   NK (not defined) or other effector cells are useful in treating patients
CC   with cancers expressing the CEA antigen, together with other or with
CC   heterologous constructs to engage additional stimulatory and functional
CC   properties of the effector cells to enhance the anti-tumour therapeutic
CC   efficacy. The cancer disorder includes colorectal, breast and lung
CC   cancers. The present sequence represents the light chain variable, VL,
CC   region of antibody hMN14. The VL protein is humanised (complementarity
CC   determining region-grafted) and has a leader peptide

PT New antibody library comprising cells comprising at least one integrated
PT retroviral vector expressing an antibody light or heavy chain, useful in
PT preparing a composition for diagnosing or treating disorders.
XX
PS Disclosure; Fig 8; 57pp; English.
XX
CC This invention relates to a new antibody library which comprises at least
CC 100 cells, each of which comprises at least one integrated retroviral
CC vector expressing an antibody light or heavy chain. Antibodies are of
CC increasing importance in human therapy, assay procedures and diagnostic
CC methods and a need exists for efficient methods of generating and
CC screening antibody libraries containing large numbers of antibodies. The
CC antibody library of the invention addresses this need, with the
CC additional advantage of strict control over multiplicity of infection
CC (MOI), and is useful in preparing a composition for diagnosing or
CC treating a wide variety of disorders. The present sequence is the amino
CC acid sequence of the MN14LC protein, which was encoded by the Gateway
CC retroviral vectors used in the exemplification of the invention.

PT Mutant bispecific antibody which is rapidly cleared from a patient's
PT body, useful as a pretargeting agent in methods for diagnosing or
PT treating diseases, such as autoimmune disease, and disease caused by
PT infectious agents.
XX
PS Example; Fig 2; 68pp; English.
XX
CC The invention relates to a mutant bispecific antibody (mbAb1) comprising
CC at least a human hinge constant region from immunoglobulin G (IgG), two
CC single chain variable fragments (scFvs), and two variable fragments
CC (Fvs), where the constant region contains one or more amino acid
CC mutations in the heavy chain 2 (CH2) domain. The methods and antibody of
CC the invention are used to diagnose or treat an immune dysregulation
CC disease, an autoimmune disease, organ graft rejection, cardiovascular
CC disease, neurological disease (Alzheimer's disease) or graft vs. host
CC disease. The methods are also useful for treating a disease caused by a
CC fungus, virus, parasite, or bacterium. The methods may also be used for
CC intraoperative or endoscopic diagnosis to identify diseased tissue. The
CC autoimmune diseases that may be diagnosed or treated include acute or
CC chronic idiopathic thrombocytopenic purpura, dermatomyositis, Sydenham's
CC chorea, myasthenia gravis, systemic lupus erythematosus, lupus nephritis,
CC rheumatic fever, polyglandular syndromes and diabetes mellitus. The
CC current sequence represents the hMN-14 light chain amino acid sequence.

XX
CC   The variable heavy (VH) and variable light (VL) genes of the 741F8 anti-c
CC   -erbB-2 monoclonal antibody (MAb), were isolated from the cDNA of the
CC   parental 741F8 hybridoma line. A two single chain Fv (sFv) gene was
CC   constructed by connecting the VH and VL genes with a DNA sequence
CC   endcoding a polypeptide linker. A synthetic DNA duplex encoding the C-
CC   terminal amino acid sequence, (Gly)4-Cys was inserted, and the resulting
CC   741F8 anti-c-erbB-2 two sFv inserted into an expression vector. The
CC   resulting gene, which encodes the present sequence, was transformed into
CC   E. coli, and protein expression induced by the addn. of IPTG to the
CC   culture medium. A compsn. comprising a carrier and the 2 sFv protein
CC   prod. can be used for in vivo imaging, and drug targetting experiments.
CC   The 2 sFv protein prod. is a homodimer, in which both fragments target
CC   the same antigen, therefore giving greater binding avidity and longer
CC   tissue retention times, compared to individual sFv protein prod.
CC   fragments. (Updated on 25-MAR-2003 to correct PF field.)

PT   translation promotion sequences, provides high expression at low copy
PT   number.
XX
PS   Example 2; Col 29-32; 24pp; English.
XX
CC   This sequence is a single chain anti-c-erbB-2 antibody (scFv) derived
CC   from hybridoma 741F8. The protein product includes a C-terminal tail Gly4
CC   -Cys in some constructs. Single-chain antibodies can be produced using a
CC   novel method which comprises culturing an immmortalised eukaryotic cell
CC   having transfected DNA sequences (encoding the protein of interest),
CC   integrated into its genome. In particular expression effector vectors
CC   containing a non-native reporter DNA (encoding the scFv) and viral
CC   sequences to promote transcription and translation (e.g. the adenovirus
CC   E1A and VA1 genes as shown in AAT91831 and AAT91834 respectively) are
CC   used. The scFv that is produced, when properly folded, has a structure
CC   with mono- or bi-functional binding activity. The method is especially
CC   used to produce single-chain antibody fragments (scFv), e.g. for imaging
CC   tumours or delivering therapeutic agents to them, particularly breast and
CC   ovarian cancers that express the c-erbB-2 antigen. Other scFv are used in
CC   model studies and for treating digoxin intoxication. (Updated on 25-MAR-
CC   2003 to correct PF field.)

PT Production of cell line for producing single-chain binding protein -
PT using construct containing DNA encoding viral transcription activator
PT protein.
XX
PS Example 2; Col 29-32; 24pp; English.
XX
CC The invention relates to methods of increasing production of a single-
CC chain binding protein, especially a single chain antibody, by generating
CC eukaryotic cell lines containing DNA encoding either a viral
CC transcription activator protein that acts on and stimulates a viral
CC promoter controlling the expression of DNA encoding the single-chain
CC binding protein, such as the adenovirus Ad2 E1A protein encoded by the
CC sequence AAT78873, or an RNA sequence able to promote translation of the
CC RNA transcript from the heterologous gene, such as the adenoviral VA1
CC gene (AAT78876). The sequence presented here is the amino acid sequence
CC of the anti-c-erbB2 single chain antibody 741. The coding sequence was
CC constructed by amplifying the variable heavy and light chain genes which
CC were then cloned into a pUC vector. For secretion from mammalian cells,
CC the sequence is preceded by the signal peptide sequence from the
CC monoclonal antibody 520C9 (AAT78880) or from PacI (AAT78881). (Updated on
CC 25-MAR-2003 to correct PF field.)

PT Imaging of antigens in vivo - using dimers of single-chain antibody Fv
PT fragments.
XX
PS Example 1; Col 25-28; 30pp; English.
XX

CC This represents the protein sequence of a 741F8 sFv' (single chain Fv) C-
CC terminal Gly4-Cys construct. This was constructed by connecting the Vh
CC and Vl genes with a DNA sequence encoding a 14 residue polypeptide
CC linker. 741F8 is a monoclonal antibody useful in targeting c-erbB-2
CC antigen. This dimeric construct can be used in the methods of invention
CC of imaging a preselected antigen expressed in a mammal. The methods are
CC used in magnetic resonance imaging of c-erbB-2 or related antigens in
CC cancer diagnosis. The biosynthetic constructs have enhanced properties as
CC in vivo targetting agents in comparison with intact monoclonal antibodies
CC or their Fab fragments. The dimeric constructs permit the in vivo
CC targetting of an epitope on an antigen with greater apparent avidity,
CC including greater tumour specificity, tumour localisation and tumour
CC retention properties than that of the Fab fragment having the same CDRS
CC as the construct

PT Nucleic acid encoding single-chain Fv fragment specific for antigens -
PT and having C-terminal tail for crosslinking to form dimer with improved
PT pharmacokinetic properties, used to deliver drugs and imaging agents,
PT especially to tumours.
XX
PS Example 1; Col 27-30; 29pp; English.
XX
CC The present sequence represents an anti-c-erbB-2 sFv'. c-erbB-2 is an
CC antigen that is overexpressed on the surface of tumour cells. An antibody
CC designated 741F78 binds c-erbB-2. Variable heavy and light sequences of
CC antibody 741F8 are connected, together with a linker, to produce the
CC present single chain Fv gene. Anti-c-erbB-2 sFv' exemplifies the
CC invention. Dimers of the single chain Fv are used for targeted delivery
CC of drugs or imaging agents (e.g. cytotoxins, prodrugs or 99m-technetium)
CC to antigen-expressing cells, particularly for treatment or diagnosis of
CC tumours (especially of ovary or breast)

PT New isolated biosynthetic polypeptides comprising antigen binding sites,
PT useful as diagnostic or therapeutic reagents for in vivo imaging and drug
PT targeting experiments, or for diagnosing or treating tumors or
PT malignancies.
XX
PS Example 1; SEQ ID NO 2; 35pp; English.
XX
CC The invention relates to an isolated polypeptide that includes an antigen
CC -binding site. Also described: (1) an isolated polypeptide comprising:
CC (a) two variable domain sequences, each variable domain sequence
CC independently comprising at least one group of 3 complementarity
CC determining regions (CDRs) interposed between framework regions (FRs),
CC which variable domains are linked to a polypeptide linker to form a
CC single polypeptide chain in which the FRs and CDRs together define a
CC variable region binding domain which can be immunologically reactive with
CC an antigen; and (b) an amino acid sequence that is a part of the single
CC polypeptide chain, and has a biological activity independent of the
CC immunological reactivity; (2) DNA sequences encoding the above
CC polypeptide; (3) vectors including the above DNA sequences; and (4)
CC methods for employing the above DNA and vectors for producing the
CC polypeptides. The polypeptide is useful as a diagnostic or therapeutic
CC reagent for in vivo imaging and drug targeting experiments. The
CC polypeptide may be used for diagnosing or treating tumors or
CC malignancies. The present sequence represents an sFv construct designated
CC 741F8 sFv', which is used in the exemplification of the present
CC invention.

XX
CC The present sequence is the protein sequence of hMN-14-0, which is
CC designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC Vkappa without a peptide linker. The use of the zero linker enables the
CC secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC The polypeptide also includes a pelB signal peptide, which precedes the
CC VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC purification. This monospecific triabody is an example of claimed
CC multivalent binding proteins specific for a tumour-associated antigen.

```
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC   acute myelogenous leukaemia, biliary, breast, cervical, chronic

XX
PS   Claim 48; Fig 14; 62pp; English.
XX
CC   The present sequence is the protein sequence of hMN-14-1G, which is
CC   designed to form an hMN-14 tetrabody. The hMN-14-1G polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa via a single glycine residues. Use of the 1G linker enables some
CC   of the the secreted polypeptide to form a tetrabody with 4 binding sites
CC   for CEA. The polypeptide also includes a pelB signal peptide, which
CC   precedes the VH moiety to facilitate synthesis of the polypeptide in the
CC   periplasmic space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific tetrabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC   acute myelogenous leukaemia, biliary, breast, cervical, chronic
CC   lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,
CC   endometrial, oesophageal, gastric, head and neck, Hodgkin's lymphoma,
CC   lung, medullary thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic,
CC   prostate and bladder

PS Disclosure; Fig 28; 87pp; English.
XX
CC The present sequence is the protein sequence of a 679 mutant diabody in
CC which antibody 679 VH has a Gln for Ile amino acid substitution at
CC position 3 and a Ser for Gln amino acid substitution at position 101.
CC Murine monoclonal antibody 679 binds with high affinity to molecules
CC containing the moiety histamine-succinyl-glycyl (HSG). The present
CC polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC sites for HSG); a pelB leader signal peptide (facilitates transport of
CC the polypeptide into the periplasmic space of Escherichia coli); and 6
CC His residues (allows purification by IMAC). The 679 diabody was expressed
CC in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC non-mutant polypeptide. The invention provides a bispecific diabody
CC comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC binding site. The HSG antigen binding site may comprise the VH and Vk
CC polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC technology and create a novel affinity enhancement system that shows
CC specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC for subsequent specific delivery of therapeutic radioisotopes carried by
CC HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC cardiovascular diseases and inflammatory diseases can be detected or
CC treated using the methods of the invention

CC The present sequence is the protein sequence of hMN-14-scFv-L5, which was
CC designed to form an hMN-14 diabody. The hMN-14-scFv-L5 polypeptide
CC comprises the C-terminal end of anti-carcinoembryonic antigen (CEA)
CC humanized monoclonal antibody hMN-14 VH linked to the N-terminal part of
CC hMN-14 Vkappa by a peptide linker that enables the secreted polypeptide
CC to dimerize into a diabody, forming 2 binding sites for CEA. The
CC polypeptide also includes a pelB signal peptide, which precedes the VH
CC moiety to facilitate synthesis of the polypeptide in the periplasmic
CC space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC purification. In the claimed monospecific diabody, each scFv comprises
CC the present sequence. The diabody is an example of claimed multivalent
CC binding proteins specific for a tumour-associated antigen. The binding
CC proteins are used in the diagnosis and treatment of a tumour, carcinoma,
CC melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma or myeloma,
CC or a cancer selected from acute lymphoblastic leukaemia, acute
CC myelogenous leukaemia, biliary, breast, cervical, chronic lymphocytic
CC leukaemia, chronic myelogenous leukaemia, colorectal, endometrial,

PT   Novel multivalent, multi-specific binding protein useful for treating
PT   cancer, has first binding site having affinity towards hapten group and
PT   second and third binding sites each having affinity towards target
PT   antigen.
XX
PS   Claim 11; Fig 6; 43pp; English.
XX
CC   The present invention describes a multivalent, multi-specific binding
CC   protein (I) comprising a first binding site having an affinity towards a
CC   hapten group and a second and a third binding sites each having affinity
CC   towards a target antigen, which may be the same or a different target
CC   antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC   and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC   useful for delivering a diagnostic agent, a therapeutic agent, or its
CC   combination to a target, which involves administering (I) to a subject,
CC   waiting for a sufficient amount of time for an amount of the non-binding
CC   protein to clear the subject's blood stream, and administering to the
CC   subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC   agent, or its combination, that binds to a binding site of the binding
CC   protein. (I) is also useful for detecting or treating a human disorder,
CC   preferably cancer, autoimmune diseases, infectious diseases,
CC   cardiovascular diseases and inflammatory diseases. The present sequence
CC   represents a hMN14-scFv-L5 amino acid sequence, which is used in the
CC   exemplification of the present invention

PS   Claim 14; Fig 37; 87pp; English.
XX
CC   The present sequence is the protein sequence for polypeptide #1 of novel
CC   bispecific diabody BS1.5H comprising the VH region of monoclonal antibody
CC   679 and the Vk region of monoclonal antibody hMN14. The 679VH moiety
CC   includes an I3Q mutation, which improves solubility. Mouse antibody 679
CC   binds with high affinity to molecules containing the moiety histamine-
CC   succinyl-glycyl (HSG). A humanised version of its VH and Vk sequences
CC   have been used in BS1.5H. Humanised antibody hMN14 binds specifically to
CC   carcinoembryonic antigen (CEA). The bispecific diabody can be produced
CC   using recombinant DNA methods, e.g. in Escherichia coli host cells. It
CC   provides a novel affinity enhancement system that shows specific affinity
CC   for HSG and CEA. Such bispecific diabodies pre-target CEA positive
CC   tumours for subsequent specific delivery of therapeutic radioisotopes
CC   carried by HSG-carrying peptides. Cancer, autoimmune diseases, infectious
CC   disease, cardiovascular diseases and inflammatory diseases can be
CC   detected or treated using the methods of the invention

PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Claim 10; Fig 29; 87pp; English.
XX
CC   The present sequence is the protein sequence of a hMN14 diabody,
CC   designated hMN14-scFv-L5. Humanised monoclonal antibody hMN14 binds
CC   specifically to carcinoembryonic antigen (CEA). hMN14-scFv-L5 comprises:
CC   hMN14 VH linked to 679 Vk via a peptide linker (enables the secreted
CC   polypeptide to dimerise into a diabody, forming 2 sites for HSG); a pelB
CC   leader signal peptide (facilitates transport of the polypeptide into the
CC   periplasmic space of Escherichia coli); and 6 His residues (allows
CC   purification by IMAC). The invention provides a bispecific diabody
CC   comprising a histamine-succinyl-glycyl (HSG) binding site and a CEA
CC   binding site. The CEA binding site may comprise the VH and Vk
CC   polypeptides of hMN14 MAb. These diabodies are produced via recombinant
CC   DNA technology and create a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

PT   Polyvalent protein complex for treating B-cell malignancy, Anthrax
PT   bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT   chains having immunoglobulin variable domains, to form complex having
PT   three antigen binding sites.
XX
PS   Example 2; SEQ ID NO 12; 148pp; English.
XX
CC   The invention relates to a polyvalent protein complex (PPC) (I),
CC   comprising a first and second polypeptide chains having immunoglobulin
CC   variable domains, where the first and second polypeptide chains form a
CC   complex having three antigen binding sites, and where each binding site
CC   comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC   useful in pretargeting method of treating or diagnosing, or treating and
CC   diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC   lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC   malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC   also useful for diagnosing a non-neoplastic disease or disorder where the
CC   disease or disorder is caused by a fungus, a virus, a bacterium, a
CC   mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC   infarction, ischemic heart disease, atherosclerotic plaques, graft
CC   rejection, Alzheimer's disease or inflammation caused by accretion of
CC   activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC   site of inflammation (caused by infectious agent). (I) is useful in
CC   antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
CC   molecule, and immunostaining technique. This sequence corresponds to the
CC   chimeric hBS14 polypeptide 2 containing heavy and light chain variable
CC   regions.

PT   Polyvalent protein complex for treating B-cell malignancy, Anthrax
PT   bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT   chains having immunoglobulin variable domains, to form complex having
PT   three antigen binding sites.
XX
PS   Example 1; SEQ ID NO 1; 148pp; English.
XX
CC   The invention relates to a polyvalent protein complex (PPC) (I),
CC   comprising a first and second polypeptide chains having immunoglobulin
CC   variable domains, where the first and second polypeptide chains form a
CC   complex having three antigen binding sites, and where each binding site
CC   comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC   useful in pretargeting method of treating or diagnosing, or treating and
CC   diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC   lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC   malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC   also useful for diagnosing a non-neoplastic disease or disorder where the
CC   disease or disorder is caused by a fungus, a virus, a bacterium, a
CC   mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC   infarction, ischemic heart disease, atherosclerotic plaques, graft
CC   rejection, Alzheimer's disease or inflammation caused by accretion of
```

CC activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC site of inflammation (caused by infectious agent). (I) is useful in
CC antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
CC molecule, and immunostaining technique. This sequence corresponds to the
CC chimeric BS14HP polypeptide 1 containing heavy and light chain variable
CC regions. The encoded polypeptide is designated alpha-factor-h679Vh-GGGGS-
CC hMN-14Vk-LEGGGS-hMN-14Vh-6-His where the hMN14 is from a humanized
CC antibody that binds specifically to the carcinoembryonic antigen and the
CC h679 is a monoclonal antibody that binds the tri-peptide moiety histamine
CC -succinyl-glycyl (HSG).

PT Novel multivalent, multi-specific binding protein useful for treating
PT cancer, has first binding site having affinity towards hapten group and
PT second and third binding sites each having affinity towards target
PT antigen.
XX
PS Claim 48; Fig 9A-B; 43pp; English.
XX
CC The present invention describes a multivalent, multi-specific binding
CC protein (I) comprising a first binding site having an affinity towards a
CC hapten group and a second and a third binding sites each having affinity
CC towards a target antigen, which may be the same or a different target
CC antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC useful for delivering a diagnostic agent, a therapeutic agent, or its
CC combination to a target, which involves administering (I) to a subject,
CC waiting for a sufficient amount of time for an amount of the non-binding
CC protein to clear the subject's blood stream, and administering to the
CC subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC agent, or its combination, that binds to a binding site of the binding
CC protein. (I) is also useful for detecting or treating a human disorder,
CC preferably cancer, autoimmune diseases, infectious diseases,
CC cardiovascular diseases and inflammatory diseases. The present sequence
CC represents the TS1 VL chain amino acid sequence, which is used in the
CC exemplification of the present invention

PT New chimeric molecule from humanized antibody against carcinoembryonic
PT antigen and having signaling molecules of T cells and other effector
PT cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS Disclosure; Page 7-8; 20pp; English.
XX
CC The invention relates to a chimaeric molecule comprising the
CC carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC which the cysteine residues have been mutated, with the IgTCR molecule
CC occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC NK (not defined) or other effector cells are useful in treating patients
CC with cancers expressing the CEA antigen, together with other or with
CC heterologous constructs to engage additional stimulatory and functional
CC properties of the effector cells to enhance the anti-tumour therapeutic
CC efficacy. The cancer disorder includes colorectal, breast and lung
CC cancers. The present sequence represents the chimaeric molecule of the

PT   New chimeric molecule useful in treating patients with disorders, such as
PT   melanoma, neuroendocrine disorders, prostate and small cell lung cancer
PT   comprises GD3 and/or PSMA binding domains of antibody.
XX
PS   Disclosure; Page 7-8; 35pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the GD3
CC   (ganglioside antigen) binding domain of antibody MB3.6, with any of 3
CC   variable gene sequences, or the PSMA (prostate-specific membrane antigen)
CC   binding domain of antibody 3D8, 4D4 and 3E11, with variable gene
CC   sequences, the zeta signalling chain of the T cell receptor and an
CC   intervening CD8alpha hinge in which cysteine residues have been mutated.
CC   The chimaeric molecules expressed in T cells or NK cells or other
CC   effector cells are useful in treating patients with cancers expressing
CC   the GD3 (MB3.6 derivatives) or PSMA antigen (3D8, 4D4, 3E11 derivatives),
CC   and/or together with each other or with heterologous constructs to engage
CC   additional stimulatory and functional properties of the effector cells to
CC   enhance the antitumour therapeutic efficacy (claimed). They are
CC   particularly useful in disorders including melanoma, neuroendocrine
CC   tumours and prostate and small cell lung cancer. The present sequence is
CC   a hMN14 antibody (specific to CEA antigen) in a fusion protein with the
CC   modified CD8alpha hinge and the T-cell receptor zeta chain (IgTCR)
CC   encoded by a retroviral vector. The hMN14 antibody coding region is
CC   replaced with the MB3.6, 3D8, 4D4 or 3E11 genes of the invention.

PT   New single chain Fv polypeptide binding to C-erbB-2 tumour antigen - for
PT   imaging or treating breast or ovarian cancer etc.
XX
PS   Example; Page 71-74; 87pp; English.
XX
CC   c-erbB-2 refers to a protein antigen expressed on the surface of tumour
CC   cells. such as breast and ovarian tumour cells, which is an approx.
CC   200,000 mol. wt. acidic glycoprotein having an isolelectric pt. of about
CC   5.3 (see AAQ46083, AAR39568). A single chain Fv (sFv) is a covalently
CC   linked VH-VL heterodimer which is expressed from a gene fusion including
CC   VH- and VL- encoding genes connected by a peptide-encoding linker. Such
CC   linker sequences are set forth in AA residues 116-135 in AAR39569, which
CC   includes part of the 16 AA linker sequences in AAR39572. Using AAQ46084
CC   for the 520C9 monoclonal antibody, a single chain polypeptide can be
CC   produced having a binding affinity for a c-erbB-2 related antigen. In
CC   another design, the pseudomonal exotoxin fragment analogous to ricin A
CC   chain, PE40, is fused to the carboxy terminus of the antic-c-erbB-2 741
CC   sFv. the resulting 741F8 sFv-PE40 is a single-chain Fv-toxin fusion
CC   protein, which was constructed with an 18 residue short FB leader which
CC   initially was left on the protein. 'X' in AAR39573 refers to posn. of
CC   stop codon in cDNA. (Updated on 25-MAR-2003 to correct PN field.)

PT   Composition useful as cancer vaccine, comprises polypeptide having
PT   antibody heavy chain fused to antibody light chain, or multivalent
PT   antibody having two polypeptides with antibody heavy chain fused to
PT   antibody light chain.
XX
PS   Disclosure; SEQ ID NO 3; 101pp; English.
XX
CC   The invention describes a composition (I) comprising: (a) a polypeptide
CC   comprising at least one antibody heavy chain fused to at least one
CC   antibody light chain; or (b) a multivalent antibody comprising at least
CC   two polypeptides, where each of the polypeptides comprises at least one
CC   antibody heavy chain fused to at least one antibody light chain. Also
CC   described: (1) a composition (II) comprising a nucleic acid comprising at
CC   least one antibody heavy chain gene and at least one antibody light chain
CC   gene, where the nucleic acid encodes a polypeptide comprising at least
CC   one antibody heavy chain fused to at least one antibody light chain; (2)
CC   a method (M1) of binding an antigen, involves providing a polypeptide
CC   comprising at least one antibody heavy chain fused to at least one
CC   antibody light chain, and contacting the polypeptide with a sample having
CC   an antigen under conditions such that the polypeptide binds to the
CC   antigen; (3) a method (M2), which involves providing a vector comprising
CC   a bicistronic expression construct comprising genes encoding an antibody
CC   heavy chain gene and an antibody light chain gene, and altering the
CC   nucleic acid sequence of a splice acceptor sequence or a splice donor
CC   sequence in the antibody light chain gene or the antibody heavy chain
CC   gene under conditions such that splicing is prevented at the splice
CC   acceptor sequence or donor sequence; (4) a nucleic acid sequence produced
CC   by (M2); (5) a vector (III) comprising a modified antibody heavy or light
CC   gene, where modification eliminates a splice donor or acceptor sequence
CC   in antibody heavy or light chain gene; and (6) a host cell comprising
CC   (III). (I) is useful in in vitro binding assays for identifying antigens
CC   in a mixture or determining the presence or absence of expression of a
CC   particular protein. (I) is also useful as vaccine for treating cancer and
CC   infections caused by pathogens e.g. virus or bacteria. The present
CC   sequence represents an exemplary antibody fusion protein from the present
CC   invention.

PT   Novel domain deleted CC49 antibody reactive with tumor associated antigen
PT   -72, or C2B8 antibody reactive with CD20, useful for treating
PT   myelosuppressed patient suffering from a neoplastic disorder.
XX
PS   Example 3; Fig 8B; 74pp; English.
XX
CC   The present invention relates to domain deleted CC49 or C2B8 antibodies.
CC   Domain deleted CC49 antibodies comprise a heavy chain human CC49 domain
CC   deleted sequence in which CH2 domain has been deleted and are reactive
CC   with tumour associated antigen (TAG)-72. The C2B8 antibodies are reactive
CC   with CD20 and comprise a heavy chain having a sequence of a derived
CC   domain deleted C2B8 construct where the CH2 domain has been deleted.
CC   Sequences of the invention are useful for imaging a neoplasm. They are
CC   also useful for treating myelosuppressed patients suffering from
CC   neoplastic disorder such as haematologic neoplasm, preferably non-
CC   Hodgkin's lymphoma. Antibodies of the invention are also used to treat
CC   neoplastic disorder, colon cancer and haematologic malignancy. They are
CC   useful for reducing tumour size, inhibiting tumour growth and/or
CC   prolonging the survival time of tumour-bearing animals and for treating
CC   tumours. The present sequence is human C5E10 light chain protein. This
CC   sequence is used in the exemplification of the invention

PT New recombinant ScFv antibody from a well-characterized monoclonal
PT antibody, useful for the diagnosis and treatment of Venezuelan equine
PT encephalitis.
XX
PS Disclosure; Fig 12; 72pp; English.
XX
CC The invention describes a new recombinant A116-16 single chain variable
CC fragment (ScFv) antibody (I) against Venezuelan equine encephalitis
CC (VEE). The recombinant MA116-15 ScFv antibody is useful as a diagnostic
CC reagent for detection and identification of VEE. The other recombinant
CC antibodies are useful as immunotherapeutic and/or immunodiagnostic
CC reagents for VEE. The antibodies are also useful for gene therapy. This
CC is the amino acid sequence of an anti-venezuelan equine enchephalitis
CC (VEE) virus single chain variable fragment antibody

CC   -!- FUNCTION: May act early in the ethylene signal transduction
CC       pathway, possibly as an ethylene receptor, or as a regulator of
CC       the pathway (By similarity).
CC   -!- COFACTOR: Binds 1 copper ion per dimer (By similarity).
CC   -!- SUBUNIT: Homodimer; disulfide-linked (By similarity).
CC   -!- SUBCELLULAR LOCATION: Endoplasmic reticulum (By similarity).
CC   -!- INDUCTION: Constitutive expression. Not induced by senescence,
CC       wounding, application of ethephon or infection with virus.
CC   -!- PTM: Activation probably requires a transfer of a phosphate group
CC       between a His in the transmitter domain and an Asp of the receiver
CC       domain (By similarity).
CC   -!- SIMILARITY: Belongs to the ethylene receptor family.
CC   -!- SIMILARITY: Contains 1 histidine kinase domain.
CC   -!- SIMILARITY: Contains 1 response regulatory domain.
CC   ----------------------------------------------------------------------

RL   (er) Plant Gene Register PGR96-015.
CC   -!- FUNCTION: May act early in the ethylene signal transduction
CC       pathway, possibly as an ethylene receptor, or as a regulator of
CC       the pathway (By similarity).
CC   -!- COFACTOR: Binds 1 copper ion per dimer (By similarity).
CC   -!- SUBUNIT: Homodimer; disulfide-linked (By similarity).
CC   -!- SUBCELLULAR LOCATION: Endoplasmic reticulum (By similarity).
CC   -!- TISSUE SPECIFICITY: Leaves, flowers and fruits.
CC   -!- DEVELOPMENTAL STAGE: Induced in imbibing seeds prior to
CC       germination and down-regulated in elongating seedlings and
CC       senescing leaf petioles.
CC   -!- INDUCTION: Not induced by ethylene.
CC   -!- PTM: Activation probably requires a transfer of a phosphate group
CC       between a His in the transmitter domain and an Asp of the receiver
CC       domain (By similarity).
CC   -!- SIMILARITY: Belongs to the ethylene receptor family.
CC   -!- SIMILARITY: Contains 1 histidine kinase domain.
CC   -!- SIMILARITY: Contains 1 response regulatory domain.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 5; Page 38; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence is a murine derived CDR region which corresponds
CC to CDR 3 in the light chain of the humanised MAb. See AAR97313-97333

PT Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT comprises administering, either concurrently or sequentially, Class III
PT anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT therapeutic agent(s).
XX
PS Claim 6; SEQ ID NO 22; 88pp; English.
XX
CC The invention relates to a method of treating a non-medullary thyroid
CC carcinoma or treating medullary thyroid carcinoma involves administering
CC to a subject, either concurrently or sequentially, a Class III anti-CEA
CC (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC least one therapeutic agent. The antibody or its fragment comprises the
CC complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC ovarian cancer, in a subject. This sequence corresponds to the CDR3 of
CC the murine MN-14 antibody light chain variable region and used to
CC generate the humanised/chimeric antibody of the invention.

PT Treating non-medullary or medullary thyroid carcinoma, involves
PT administering to subject, either concurrently or sequentially, anti-
PT carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS Claim 8; Page 76; 122pp; English.
XX
CC This invention relates to methods for treating cancers that express
CC carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC antibodies that can be used following administration of an agent that
CC will increase antibody effector functions or following administration of
CC an amount of interferon effective to upregulate CEA expression in tumour
CC cells. The present invention describes the anti-CEA antibody as a class
CC III humanised murine monoclonal antibody that retains specificity for CEA
CC binding and is preferably an MN-14 antibody or fragment thereof.
CC Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC composition useful for the treatment of non-medullary or medullary
CC thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC carcinoma, as well as breast or lung cancer. Furthermore, it can
CC stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC cell growth and angiogenesis. This peptide sequence is a CDR region of
CC the humanised murine MN-14 antibody of the invention.

PT New chimeric molecule from humanized antibody against carcinoembryonic
PT antigen and having signaling molecules of T cells and other effector
PT cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS Disclosure; Page 10-11; 20pp; English.
XX
CC The invention relates to a chimaeric molecule comprising the
CC carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC which the cysteine residues have been mutated, with the IgTCR molecule
CC occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC NK (not defined) or other effector cells are useful in treating patients
CC with cancers expressing the CEA antigen, together with other or with
CC heterologous constructs to engage additional stimulatory and functional
CC properties of the effector cells to enhance the anti-tumour therapeutic
CC efficacy. The cancer disorder includes colorectal, breast and lung
CC cancers. The present sequence represents the light chain variable, VL,
CC region of antibody hMN14. The VL protein is humanised (complementarity
CC determining region-grafted) and has a leader peptide

PT New antibody library comprising cells comprising at least one integrated
PT retroviral vector expressing an antibody light or heavy chain, useful in
PT preparing a composition for diagnosing or treating disorders.
XX
PS Disclosure; Fig 8; 57pp; English.
XX
CC This invention relates to a new antibody library which comprises at least
CC 100 cells, each of which comprises at least one integrated retroviral
CC vector expressing an antibody light or heavy chain. Antibodies are of
CC increasing importance in human therapy, assay procedures and diagnostic
CC methods and a need exists for efficient methods of generating and
CC screening antibody libraries containing large numbers of antibodies. The
CC antibody library of the invention addresses this need, with the
CC additional advantage of strict control over multiplicity of infection
CC (MOI), and is useful in preparing a composition for diagnosing or
CC treating a wide variety of disorders. The present sequence is the amino
CC acid sequence of the MN14LC protein, which was encoded by the Gateway
CC retroviral vectors used in the exemplification of the invention.

XX
CC The invention relates to a mutant bispecific antibody (mbAb1) comprising
CC at least a human hinge constant region from immunoglobulin G (IgG), two
CC single chain variable fragments (scFvs), and two variable fragments
CC (Fvs), where the constant region contains one or more amino acid

```
CC   mutations in the heavy chain 2 (CH2) domain. The methods and antibody of
CC   the invention are used to diagnose or treat an immune dysregulation
CC   disease, an autoimmune disease, organ graft rejection, cardiovascular
CC   disease, neurological disease (Alzheimer's disease) or graft vs. host
CC   disease. The methods are also useful for treating a disease caused by a
CC   fungus, virus, parasite, or bacterium. The methods may also be used for
CC   intraoperative or endoscopic diagnosis to identify diseased tissue. The
CC   autoimmune diseases that may be diagnosed or treated include acute or
CC   chronic idiopathic thrombocytopenic purpura, dermatomyositis, Sydenham's
CC   chorea, myasthenia gravis, systemic lupus erythematosus, lupus nephritis,
CC   rheumatic fever, polyglandular syndromes and diabetes mellitus. The
CC   current sequence represents the hMN-14 light chain amino acid sequence.

CC   The present sequence is the protein sequence of hMN-14-0, which is
CC   designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa without a peptide linker. The use of the zero linker enables the
CC   secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC   The polypeptide also includes a pelB signal peptide, which precedes the
CC   VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific triabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC   acute myelogenous leukaemia, biliary, breast, cervical, chronic
CC   lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,
CC   endometrial, oesophageal, gastric, head and neck, Hodgkin's lymphoma,
CC   lung, medullary thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic,
CC   prostate and bladder

PT   New kit comprising a multivalent, multi-specific binding protein and a
PT   carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Disclosure; Fig 28; 87pp; English.
XX
CC   The present sequence is the protein sequence of a 679 mutant diabody in
CC   which antibody 679 VH has a Gln for Ile amino acid substitution at
CC   position 3 and a Ser for Gln amino acid substitution at position 101.
CC   Murine monoclonal antibody 679 binds with high affinity to molecules
CC   containing the moiety histamine-succinyl-glycyl (HSG). The present
CC   polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC   (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC   sites for HSG); a pelB leader signal peptide (facilitates transport of
CC   the polypeptide into the periplasmic space of Escherichia coli); and 6
CC   His residues (allows purification by IMAC). The 679 diabody was expressed
CC   in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC   non-mutant polypeptide. The invention provides a bispecific diabody
CC   comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC   binding site. The HSG antigen binding site may comprise the VH and Vk
CC   polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC   technology and create a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

XX
CC   The present sequence is the protein sequence of hMN-14-scFv-L5, which was
CC   designed to form an hMN-14 diabody. The hMN-14-scFv-L5 polypeptide
CC   comprises the C-terminal end of anti-carcinoembryonic antigen (CEA)
CC   humanized monoclonal antibody hMN-14 VH linked to the N-terminal part of
CC   hMN-14 Vkappa by a peptide linker that enables the secreted polypeptide
CC   to dimerize into a diabody, forming 2 binding sites for CEA. The
CC   polypeptide also includes a pelB signal peptide, which precedes the VH
CC   moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. In the claimed monospecific diabody, each scFv comprises
CC   the present sequence. The diabody is an example of claimed multivalent
CC   binding proteins specific for a tumour-associated antigen. The binding
CC   proteins are used in the diagnosis and treatment of a tumour, carcinoma,
CC   melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma or myeloma,
CC   or a cancer selected from acute lymphoblastic leukaemia, acute
CC   myelogenous leukaemia, biliary, breast, cervical, chronic lymphocytic
CC   leukaemia, chronic myelogenous leukaemia, colorectal, endometrial,
CC   oesophageal, gastric, head and neck, Hodgkin's lymphoma, lung, medullary
CC   thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic, prostate and
CC   bladder

PT   Novel multivalent, multi-specific binding protein useful for treating
PT   cancer, has first binding site having affinity towards hapten group and
PT   second and third binding sites each having affinity towards target
PT   antigen.
XX
PS   Claim 11; Fig 6; 43pp; English.
XX
CC   The present invention describes a multivalent, multi-specific binding
CC   protein (I) comprising a first binding site having an affinity towards a
CC   hapten group and a second and a third binding sites each having affinity
CC   towards a target antigen, which may be the same or a different target
CC   antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC   and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC   useful for delivering a diagnostic agent, a therapeutic agent, or its
CC   combination to a target, which involves administering (I) to a subject,
CC   waiting for a sufficient amount of time for an amount of the non-binding
CC   protein to clear the subject's blood stream, and administering to the
CC   subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC   agent, or its combination, that binds to a binding site of the binding
CC   protein. (I) is also useful for detecting or treating a human disorder,
CC   preferably cancer, autoimmune diseases, infectious diseases,
```

```
CC   cardiovascular diseases and inflammatory diseases. The present sequence
CC   represents a hMN14-scFv-L5 amino acid sequence, which is used in the
CC   exemplification of the present invention

PS   Claim 14; Fig 34; 87pp; English.
XX
CC   The present sequence is the protein sequence for polypeptide #1 of novel
CC   bispecific diabody BS2 comprising the VH region of monoclonal antibody
CC   679 and the Vk region of monoclonal antibody hMN14. The 679VH moiety
CC   includes I3Q and C101S mutations, which improve solubility. Mouse
CC   antibody 679 binds with high affinity to molecules containing the moiety
CC   histamine-succinyl-glycyl (HSG). Humanised antibody hMN14 binds
CC   specifically to carcinoembryonic antigen (CEA). The bispecific diabody
CC   can be produced using recombinant DNA methods, e.g. in Escherichia coli
CC   host cells. It provides a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. Such bispecific diabodies pre-target
CC   CEA positive tumours for subsequent specific delivery of therapeutic
CC   radioisotopes carried by HSG-carrying peptides. Cancer, autoimmune
CC   diseases, infectious disease, cardiovascular diseases and inflammatory
CC   diseases can be detected or treated using the methods of the invention

XX
PS   Claim 10; Fig 29; 87pp; English.
XX
CC   The present sequence is the protein sequence of a hMN14 diabody,
CC   designated hMN14-scFv-L5. Humanised monoclonal antibody hMN14 binds
CC   specifically to carcinoembryonic antigen (CEA). hMN14-scFv-L5 comprises:
CC   hMN14 VH linked to 679 Vk via a peptide linker (enables the secreted
CC   polypeptide to dimerise into a diabody, forming 2 sites for HSG); a pelB
CC   leader signal peptide (facilitates transport of the polypeptide into the
CC   periplasmic space of Escherichia coli); and 6 His residues (allows
CC   purification by IMAC). The invention provides a bispecific diabody
CC   comprising a histamine-succinyl-glycyl (HSG) binding site and a CEA
CC   binding site. The CEA binding site may comprise the VH and Vk
CC   polypeptides of hMN14 MAb. These diabodies are produced via recombinant
CC   DNA technology and create a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

PT Polyvalent protein complex for treating B-cell malignancy, Anthrax
PT bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT chains having immunoglobulin variable domains, to form complex having
PT three antigen binding sites.
XX
PS Example 2; SEQ ID NO 12; 148pp; English.
XX
CC The invention relates to a polyvalent protein complex (PPC) (I),
CC comprising a first and second polypeptide chains having immunoglobulin
CC variable domains, where the first and second polypeptide chains form a
CC complex having three antigen binding sites, and where each binding site
CC comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC useful in pretargeting method of treating or diagnosing, or treating and
CC diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC also useful for diagnosing a non-neoplastic disease or disorder where the
CC disease or disorder is caused by a fungus, a virus, a bacterium, a
CC mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC infarction, ischemic heart disease, atherosclerotic plaques, graft
CC rejection, Alzheimer's disease or inflammation caused by accretion of
CC activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC site of inflammation (caused by infectious agent). (I) is useful in
CC antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
CC molecule, and immunostaining technique. This sequence corresponds to the
CC chimeric hBS14 polypeptide 2 containing heavy and light chain variable
CC regions.

PT Novel multivalent, multi-specific binding protein useful for treating
PT cancer, has first binding site having affinity towards hapten group and
PT second and third binding sites each having affinity towards target
PT antigen.
XX
PS Claim 48; Fig 9A-B; 43pp; English.
XX
CC The present invention describes a multivalent, multi-specific binding
CC protein (I) comprising a first binding site having an affinity towards a
CC hapten group and a second and a third binding sites each having affinity
CC towards a target antigen, which may be the same or a different target
CC antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC useful for delivering a diagnostic agent, a therapeutic agent, or its
CC combination to a target, which involves administering (I) to a subject,
CC waiting for a sufficient amount of time for an amount of the non-binding
CC protein to clear the subject's blood stream, and administering to the
CC subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC agent, or its combination, that binds to a binding site of the binding
CC protein. (I) is also useful for detecting or treating a human disorder,
CC preferably cancer, autoimmune diseases, infectious diseases,
CC cardiovascular diseases and inflammatory diseases. The present sequence
CC represents the TS1 VL chain amino acid sequence, which is used in the
CC exemplification of the present invention

PT New chimeric molecule from humanized antibody against carcinoembryonic
PT antigen and having signaling molecules of T cells and other effector
PT cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS Disclosure; Page 7-8; 20pp; English.
XX
CC The invention relates to a chimaeric molecule comprising the
CC carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC which the cysteine residues have been mutated, with the IgTCR molecule
CC occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC NK (not defined) or other effector cells are useful in treating patients
CC with cancers expressing the CEA antigen, together with other or with
CC heterologous constructs to engage additional stimulatory and functional
CC properties of the effector cells to enhance the anti-tumour therapeutic
CC efficacy. The cancer disorder includes colorectal, breast and lung
CC cancers. The present sequence represents the chimaeric molecule of the
CC invention

XX
PT New chimeric molecule useful in treating patients with disorders, such as
PT melanoma, neuroendocrine disorders, prostate and small cell lung cancer
PT comprises GD3 and/or PSMA binding domains of antibody.
XX

PS Disclosure; Page 7-8; 35pp; English.
XX
CC The invention relates to a chimaeric molecule comprising the GD3
CC (ganglioside antigen) binding domain of antibody MB3.6, with any of 3
CC variable gene sequences, or the PSMA (prostate-specific membrane antigen)
CC binding domain of antibody 3D8, 4D4 and 3E11, with variable gene
CC sequences, the zeta signalling chain of the T cell receptor and an
CC intervening CD8alpha hinge in which cysteine residues have been mutated.
CC The chimaeric molecules expressed in T cells or NK cells or other
CC effector cells are useful in treating patients with cancers expressing
CC the GD3 (MB3.6 derivatives) or PSMA antigen (3D8, 4D4, 3E11 derivatives),
CC and/or together with each other or with heterologous constructs to engage
CC additional stimulatory and functional properties of the effector cells to
CC enhance the antitumour therapeutic efficacy (claimed). They are
CC particularly useful in disorders including melanoma, neuroendocrine
CC tumours and prostate and small cell lung cancer. The present sequence is
CC a hMN14 antibody (specific to CEA antigen) in a fusion protein with the
CC modified CD8alpha hinge and the T-cell receptor zeta chain (IgTCR)
CC encoded by a retroviral vector. The hMN14 antibody coding region is
CC replaced with the MB3.6, 3D8, 4D4 or 3E11 genes of the invention.

PT Composition useful as cancer vaccine, comprises polypeptide having
PT antibody heavy chain fused to antibody light chain, or multivalent
PT antibody having two polypeptides with antibody heavy chain fused to
PT antibody light chain.
XX
PS Disclosure; SEQ ID NO 3; 101pp; English.
XX
CC The invention describes a composition (I) comprising: (a) a polypeptide
CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain; or (b) a multivalent antibody comprising at least
CC two polypeptides, where each of the polypeptides comprises at least one
CC antibody heavy chain fused to at least one antibody light chain. Also
CC described: (1) a composition (II) comprising a nucleic acid comprising at
CC least one antibody heavy chain gene and at least one antibody light chain
CC gene, where the nucleic acid encodes a polypeptide comprising at least
CC one antibody heavy chain fused to at least one antibody light chain; (2)
CC a method (M1) of binding an antigen, involves providing a polypeptide
CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain, and contacting the polypeptide with a sample having
CC an antigen under conditions such that the polypeptide binds to the
CC antigen; (3) a method (M2), which involves providing a vector comprising
CC a bicistronic expression construct comprising genes encoding an antibody
CC heavy chain gene and an antibody light chain gene, and altering the
CC nucleic acid sequence of a splice acceptor sequence or a splice donor
CC sequence in the antibody light chain gene or the antibody heavy chain
CC gene under conditions such that splicing is prevented at the splice
CC acceptor sequence or donor sequence; (4) a nucleic acid sequence produced
CC by (M2); (5) a vector (III) comprising a modified antibody heavy or light
CC gene, where modification eliminates a splice donor or acceptor sequence
CC in antibody heavy or light chain gene; and (6) a host cell comprising
CC (III). (I) is useful in in vitro binding assays for identifying antigens
CC in a mixture or determining the presence or absence of expression of a
CC particular protein. (I) is also useful as vaccine for treating cancer and
CC infections caused by pathogens e.g. virus or bacteria. The present
CC sequence represents an exemplary antibody fusion protein from the present
CC invention.

PT Identifying a mitochondrial target for drug screening assays and for
PT treating diseases associated with altered mitochondrial function,
PT comprises detecting a modified polypeptide in a sample and correlating
PT with the disease.
XX
PS Claim 1; SEQ ID NO 2379; 180pp; English.
XX
CC This invention relates to novel mitochondrial targets that can be used
CC for therapeutic intervention in treating a disease associated with
CC altered mitochondrial function. Specifically, it refers to a method for
CC identifying proteins of the human heart mitochondrial proteome that are
CC useful for drug screening assays, as well as therapeutic targets. The
CC present invention describes a method for identifying such proteins that
CC can be used in the treatment of various diseases associated with altered
CC mitochondrial function including diabetes mellitus, Huntington's disease,
CC osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial
CC encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy
CC ragged red fibre syndrome (MERRF) or cancer. Accordingly, these
CC compositions have neuroprotective, nootropic, antidiabetic,
CC anticonvulsant, antiarthritic, osteopathic, ophthalmological and
CC cytostatic activities. This polypeptide sequence is a human heart
CC mitochondrial protein of the invention.

PT 830 Primers useful for synthesizing full length cDNA clones and their use
PT in genetic manipulation.
XX
PS Claim 8; SEQ ID NO 3503; 1380pp + Sequence Listing; English.
XX
CC The invention relates to primers for synthesising full length cDNA
CC clones. 830 cDNA molecules encoding a human protein have been isolated
CC and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have
CC been determined. Primers for synthesising the full length cDNA are useful
CC for clarifying the function of the protein encoded by the cDNA. The full
CC length clones were obtained by construction of full length enriched cDNA
CC libraries that were synthesised by the oligo-capping method. The primers
CC enable the production of the full length cDNA easily without any special
CC methods. The present sequence is a polypeptide encoded by a full length
CC human cDNA of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in CD-ROM
CC format directly from EPO

PT   New 1995 cDNA, useful for treating osteoporosis, neurological diseases,
PT   Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.
XX
PS   Claim 1; SEQ ID NO 3728; 2686pp; English.
XX
CC   This invention relates to novel, isolated full length human cDNA
CC   molecules and the encoded proteins thereof. Specifically, it refers to
CC   cDNA clones obtained by an oligo-capping method, where none of these
CC   clones are identical to any known human mRNAs. The present invention
CC   describes an immunoassay to identify agonists and antagonists, as well as
CC   antibodies, antisense molecules and siRNAs that can all be used to bind
CC   to and modulate expression of the cDNA molecules. As such, these
CC   molecules are useful for diagnostic markers or therapeutic targets for
CC   the various diseases or morbid states. In particular, they are useful in
CC   gene therapy for treating osteoporosis, neurological disease, Alzheimer's
CC   disease, Parkinson's disease, dementia, short memory and various cancers,
CC   as well as for maintaining equilibrium of sense or motor function, and
CC   for treating emotional reaction, fear response and panic. Accordingly,
CC   they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,
CC   cytostatic and tranquiliser activities. This polypeptide is a protein
CC   encoded by a full length human cDNA sequence of the invention. NOTE: This
CC   sequence is not given in the sequence listing of the specification but
CC   can be obtained on CD-ROM from the European Patent Office, Vienna Sub-
CC   office.

```

CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

PT New polynucleotide encoding poly(ADP-ribose) polymerase useful as a
PT hybridization probe, and for preparing a pharmaceutical composition for
PT preventing and/or treating tumors.
XX
PS Claim 1; Fig 3; 76pp; English.
XX
CC The present sequence is that of a human protein, termed p150, having
CC poly(ADP-ribose) polymerase (PARP) activity. p150 protein was isolated
CC from a native c-Myc complex. Its C-terminal 250 amino acids shows
CC homology to the catalytic domain of PARPs, and biochemical analysis
CC showed this domain to be function. The remaining portions of p150 show no
CC significant homology to known proteins. The p150 protein may participate
CC in activating Myc/Max-driven transcription. It has the capacity to
CC stimulate Myc-mediated transcriptional activation, and the capacity to
CC inhibit cell growth, especially cell proliferation, and/or to inhibit
CC Myc/Ras-mediated transformation of cells. p150 shows ubiquitous
CC expression, and p150 transcription is elevated in the thymus. The
CC invention provides p150 nucleic acids and polypeptides, expression
CC vectors, host cells, antibodies, agonists, antagonists, pharmaceutical
CC compositions and methods for treating disorders associated with aberrant
CC regulation of cellular behaviour. Use of a p150 antagonist for the
CC treatment of cerebral ischaemia, diabetes, Alzheimer's disease,
CC Parkinson's disease, systemic lupus erythematosus or arthritis, or for
CC the prevention and/or treatment of tumours, is claimed. Also claimed is a
CC diagnostic composition comprising a p150 nucleic acid, protein or
CC antibody

PS   Example 2; SEQ ID NO 11105; 25pp; English.
XX
CC   The invention relates to a substantially purified nucleic acid molecule
CC   encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a
CC   recombinant DNA construct for expression of a nitrite reductase gene in a
CC   plant cell, and a plant cell comprising the recombinant DNA construct.
CC   The nucleic acid is useful for determining gene expression, identifying
CC   mutations in a gene of interest, and for constructing mutations in a gene
CC   of interest. Sequences given in records for SEQ IDs 9692-16825 represent
CC   a group of 7134 Mxyococcus xanthus proteins and peptides. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO

PT   Novel antibody specific for tumor necrosis factor-related apoptosis-
PT   inducing ligand, useful for inhibiting cell proliferation in cancer.
XX
PS   Example 16; Page 202; 229pp; English.
XX
CC   The invention describes a novel antibody which recognizes a tumour
CC   necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL) receptor
CC   DR5 (located on chromosome 8p21-22). The antibody has apoptosis-inducing
CC   activity to a cell expressing DR5 in vivo. It is also useful for
CC   preparing a therapeutic for selective apoptosis of abnormal or
CC   dysregulated cells, and for inhibiting cell proliferation in a cell,
CC   preferably a human breast, ovary, colon, haematopoietic, prostate,
CC   lymphatic, lung, glioma or liver cancer cell. A therapeutic agent may
CC   also be administered e.g. paclitaxel, taxol or cycloheximide. The
CC   antibody is used to treat an autoimmune disease, systemic lupus
CC   erythematosus, Hashimoto's disease, rheumatoid arthritis, graft-versus-
CC   host disease, Sjogren's syndrome, Chron's disease, pernicious anaemia,
CC   Addison disease, scleroderma, Goodpasture's syndrome, autoimmune
CC   haemolytic anaemia, sterility, myasthenia gravis, multiple sclerosis,
CC   Basedow's disease, insulin-dependent diabetes mellitus, allergy, atopic
CC   disease, arteriosclerosis, myocarditis, cardiomyopathy, glomerular
CC   nephritis, hypoplastic anaemia, rejection after organ transplantation,
CC   and numerous malignancies of lung, prostate, liver, ovary, lymphatic or
CC   breast tissue. Complementarity determining regions of the heavy and light
CC   chains of TRA-8 are shown in AAU72803-AAU72808 and the heavy chain
CC   variable region in AAU72809

PT   Inducing apoptosis and inhibiting proliferation of target cells
PT   expressing DR5, by contacting the target cell with an antibody that binds
PT   TNF-related apoptosis-inducing ligand receptor DR5 and with therapeutic
PT   agents.
XX
PS   Example 16; SEQ ID NO 30; 274pp; English.
XX
CC   The invention relates to a method of selectively inducing apoptosis in
CC   and inhibiting (M1) proliferation of target cells expressing DR5,
CC   comprising contacting the cell with an antibody that specifically binds
CC   tumor necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL)
CC   receptor DR5, where the antibody, in its soluble form, has in vivo and in
CC   vitro apoptosis-inducing activity in the cell expressing DR5, and
CC   contacting the cell with one or more therapeutic agents. M1 is useful for
CC   inducing apoptosis in target cell and inhibiting proliferation of target
CC   cell expressing DR5, where the target cell is an abnormally proliferating
CC   synovial cells (e.g. rheumatoid arthritis synovial cell), activated
CC   immune cell (e.g. activated lymphocyte), neutrophil, or virally infected
CC   cell. M2 is useful for treating a subject having inflammatory and
CC   autoimmune diseases. The inflammatory or autoimmune disease are selected
CC   from systemic lupus erythematosus, Hashimoto's disease, rheumatoid
CC   arthritis, graft-versus-host disease, Sjogren's syndrome, pernicious
CC   anemia, Addison disease, scleroderma, Goodpasture's syndrome, Crohn's
CC   disease, autoimmune hemolytic anemia, sterility, myasthenia gravis,
CC   multiple sclerosis, Basedow's disease, thrombotic, thrombocytopenia,
CC   thrombopenia purpura, insulin dependent diabetes mellitus, allergy,
CC   asthma, atopic disease, arteriosclerosis, myocarditis, cardiomyopathy,
CC   glomerular nephritis, and hypoplastic anemia. This sequence represents a
CC   protein used in the method of the invention.

XX
CC The present sequence is the protein sequence for 3B6DIVKv7 (VKv7), a
CC 'deimmunised' light chain variable region based on mouse monoclonal
CC antibody DD-3B6/22 (3B6). 3B6 is specific for human D-dimer, a
CC degradation fragment of crosslinked fibrin polymers. The heavy and light
CC chain variable regions of the 3B6 antibody have been deimmunised by
CC inclusion of one or more amino acid mutations designed to eliminate or
CC reduce recognition by major histocompatibility complex class II
CC molecules. Claimed deimmunised 3B6 antibodies for use in humans comprise
CC heavy and light chain variable regions in the combinations VHv5/VKv1,
CC VHv6/VKv1, VHv7/VKv1, VHv5/VKv7, VHv6/VKv7, VHv6/VKv4, VHv7/VKv4,
CC VHv7/VKv7, and VHv5/VKv4 (see ABP58446-51). The antibodies, labelled with
CC a reporter molecule such as a nuclear tag, are useful for detecting blood
CC clots in vivo. Antibodies further comprising a clot dissolution or clot
CC growth prevention agent fused, bound or attached to it, are useful for
CC the dissolution or removal of a blood clot in a human. The antibodies can
CC also be used to deliver cytotoxic agents, such as an isotope that emits
CC beta or gamma emission, to a subject with a fibrin-associated cancer,
CC especially a fibrin encapsulated tumour. They are useful alone or as
CC carriers of diagnostic and/or therapeutic agents to target sites such as
CC blood clots, and also for determining the kinetics of clot dissolution,
CC dissipation and/or disappearance

PT Novel variant of an immunointeractive molecule, especially a murine-
PT derived monoclonal antibody having specificity for cross-linked fibrin
PT derivatives, useful for detecting blood clots in vivo and clot
PT dissolution.
XX
PS Claim 20; Page 78-79; 87pp; English.
XX
CC The present sequence is the protein sequence for 3B6DIVKv4 (VKv4), a
CC 'deimmunised' light chain variable region based on mouse monoclonal
CC antibody DD-3B6/22 (3B6). 3B6 is specific for human D-dimer, a
CC degradation fragment of crosslinked fibrin polymers. The heavy and light
CC chain variable regions of the 3B6 antibody have been deimmunised by
CC inclusion of one or more amino acid mutations designed to eliminate or
CC reduce recognition by major histocompatibility complex class II
CC molecules. Claimed deimmunised 3B6 antibodies for use in humans comprise
CC heavy and light chain variable regions in the combinations VHv5/VKv1,
CC VHv6/VKv1, VHv7/VKv1, VHv5/VKv7, VHv6/VKv7, VHv6/VKv4, VHv7/VKv4,
CC VHv7/VKv7, and VHv5/VKv4 (see ABP58446-51). The antibodies, labelled with
CC a reporter molecule such as a nuclear tag, are useful for detecting blood
CC clots in vivo. Antibodies further comprising a clot dissolution or clot
CC growth prevention agent fused, bound or attached to it, are useful for
CC the dissolution or removal of a blood clot in a human. The antibodies can
CC also be used to deliver cytotoxic agents, such as an isotope that emits
CC beta or gamma emission, to a subject with a fibrin-associated cancer,
CC especially a fibrin encapsulated tumour. They are useful alone or as
CC carriers of diagnostic and/or therapeutic agents to target sites such as
CC blood clots, and also for determining the kinetics of clot dissolution,
CC dissipation and/or disappearance

PT Novel antibody specific for tumor necrosis factor-related apoptosis-
PT inducing ligand, useful for inhibiting cell proliferation in cancer.
XX
PS Example 26; Page 215-216; 229pp; English.
XX
CC The invention describes a novel antibody which recognizes a tumour
CC necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL) receptor
CC DR5 (located on chromosome 8p21-22). The antibody has apoptosis-inducing
CC activity to a cell expressing DR5 in vivo. It is also useful for
CC preparing a therapeutic for selective apoptosis of abnormal or
CC dysregulated cells, and for inhibiting cell proliferation in a cell,
CC preferably a human breast, ovary, colon, haematopoietic, prostate,
CC lymphatic, lung, glioma or liver cancer cell. A therapeutic agent may
CC also be administered e.g. paclitaxel, taxol or cycloheximide. The
CC antibody is used to treat an autoimmune disease, systemic lupus
CC erythematosus, Hashimoto's disease, rheumatoid arthritis, graft-versus-
CC host disease, Sjogren's syndrome, Chron's disease, pernicious anaemia,
CC Addison disease, scleroderma, Goodpasture's syndrome, autoimmune
CC haemolytic anaemia, sterility, myasthenia gravis, multiple sclerosis,
CC Basedow's disease, insulin-dependent diabetes mellitus, allergy, atopic
CC disease, arteriosclerosis, myocarditis, cardiomyopathy, glomerular
CC nephritis, hypoplastic anaemia, rejection after organ transplantation,
CC and numerous malignancies of lung, prostate, liver, ovary, lymphatic or
CC breast tissue. Fusions of the TRA-8 light chain variable region with the
CC human Ig constant region are shown in AAU72815-AAU72819 and AAU72810

PT   New purified antibody that specifically binds a TNF-related apoptosis-
PT   inducing ligand receptor DR4 or DR5, useful for treating cancer,
PT   inflammatory disease or autoimmune disease in a subject, e.g. asthma or
PT   rheumatoid arthritis.
XX
PS   Example 26; Page 241; 251pp; English.
XX
CC   The invention relates to an antibody that specifically binds a tumour
CC   necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL) receptor
CC   DR4 or DR5. Antibodies of the invention are useful for selectively
CC   inducing apoptosis in target cells expressing DR4, for inhibiting
CC   proliferation of target cells expressing DR4 or for treating cancer,
CC   inflammatory disease or autoimmune disease in a subject e.g. systemic
CC   lupus erythematosus, Hashimoto's disease, rheumatoid arthritis, graft-
CC   versus-host disease, Goodpasture's syndrome, Crohn's disease, multiple
CC   sclerosis, diabetes mellitus, allergy, asthma, arteriosclerosis or
CC   glomerular nephritis. The present sequence is LM1 fusion protein which
CC   comprises humanised mouse anti-human DR5 antibody (TRA-8) light chain
CC   variable region and human Ig light (kappa) chain constant region.
CC   (Updated on 23-OCT-2003 to standardise OS field)

PT   Inducing apoptosis and inhibiting proliferation of target cells
PT   expressing DR5, by contacting the target cell with an antibody that binds
PT   TNF-related apoptosis-inducing ligand receptor DR5 and with therapeutic
PT   agents.
XX
PS   Example 26; SEQ ID NO 72; 274pp; English.
XX
CC   The invention relates to a method of selectively inducing apoptosis in
CC   and inhibiting (M1) proliferation of target cells expressing DR5,
CC   comprising contacting the cell with an antibody that specifically binds
CC   tumor necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL)
CC   receptor DR5, where the antibody, in its soluble form, has in vivo and in
CC   vitro apoptosis-inducing activity in the cell expressing DR5, and
CC   contacting the cell with one or more therapeutic agents. M1 is useful for
CC   inducing apoptosis in target cell and inhibiting proliferation of target
CC   cell expressing DR5, where the target cell is an abnormally proliferating
CC   synovial cells (e.g. rheumatoid arthritis synovial cell), activated
CC   immune cell (e.g. activated lymphocyte), neutrophil, or virally infected
CC   cell. M2 is useful for treating a subject having inflammatory and
CC   autoimmune diseases. The inflammatory or autoimmune disease are selected
CC   from systemic lupus erythematosus, Hashimoto's disease, rheumatoid
CC   arthritis, graft-versus-host disease, Sjogren's syndrome, pernicious
CC   anemia, Addison disease, scleroderma, Goodpasture's syndrome, Crohn's
CC   disease, autoimmune hemolytic anemia, sterility, myasthenia gravis,
CC   multiple sclerosis, Basedow's disease, thrombotic, thrombocytopenia,
CC   thrombopenia purpura, insulin dependent diabetes mellitus, allergy,
CC   asthma, atopic disease, arteriosclerosis, myocarditis, cardiomyopathy,
CC   glomerular nephritis, and hypoplastic anemia. This sequence represents a
CC   protein used in the method of the invention.

ALIGNMENTS

RESULT 1
S61096
probable membrane protein YNL048w - yeast (Saccharomyces cerevisiae)
N;Alternate names: hypothetical protein N2510
C;Species: Saccharomyces cerevisiae
C;Date: 23-Feb-1996 #sequence_revision 01-Mar-1996 #text_change 09-Jul-2004
C;Accession: S61096; S62153; S62973; S62976; S65103
R;Nasr, F.; Becam, A.M.; Herbert, C.J.
submitted to the EMBL Data Library, December 1995
A;Description: The sequence of 12.8kb from the left arm of chromosome XIV reveals a sigm
ne A4 hydrolase.
A;Reference number: S61095
A;Accession: S61096
A;Molecule type: DNA
A;Residues: 1-548 <NAS>
A;Cross-references: UNIPROT:P53954; UNIPARC:UPI0000125849; EMBL:X94547; NID:g1149538; PI
R;Bergez, P.; Doignon, F.; Crouzet, M.
Yeast 11, 967-974, 1995
A;Title: The sequence of a 44 420 bp fragment located on the left arm of chromosome XIV
A;Reference number: S58711; MUID:96021608; PMID:8533472
A;Accession: S62153
A;Status: nucleic acid sequence not shown; translation not shown
A;Molecule type: DNA
A;Residues: 1-548 <BER>
A;Cross-references: UNIPARC:UPI0000125849; EMBL:U12141; NID:g1314216; PIDN:AAA99664.1; P
A;Note: the nucleotide sequence was submitted to the EMBL Data Library, July 1994
R;Nasr, F.; Becam, A.M.; Herbert, C.
submitted to the Protein Sequence Database, April 1996
A;Reference number: S62967

CC   -!- FUNCTION: Part of the ABC transporter complex fbpABC involved in
CC       Fe(3+) ions import. Responsible for energy coupling to the
CC       transport system (By similarity).
CC   -!- CATALYTIC ACTIVITY: ATP + H(2)O + Fe(3+)(Out) = ADP + phosphate +
CC       Fe(3+)(In).
CC   -!- SUBUNIT: The complex is composed of two ATP-binding proteins
CC       (fbpC), two transmembrane proteins (fbpB) and a solute-binding
CC       protein (fbpA) (By similarity).
CC   -!- SUBCELLULAR LOCATION: Inner membrane-associated (By similarity).
CC   -!- SIMILARITY: Belongs to the ABC transporter family.

CC   -!- FUNCTION: In vitro; can phosphorylate exogenous substrates on Ser
CC       and Thr residues. May have a physiological role in development
CC       being involved in cellular growth and differentiation.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC       tyrosine phosphate.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
CC   -!- COFACTOR: Magnesium.
CC   -!- ENZYME REGULATION: Autophosphorylates on Tyr-356 and Tyr-358.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic.
CC   -!- DEVELOPMENTAL STAGE: Highly expressed and active during
CC       embryogenesis and pupation and at lower levels in larva and adult.
CC   -!- PTM: Phosphorylated on serine/threonine residues.
CC   -!- SIMILARITY: Belongs to the Ser/Thr protein kinase family. MNB/DYRK
CC       subfamily.
CC   -!- CAUTION: Ref.6 sequence differs from that shown due to a deletion
CC       within an exon that does not correspond to an intron.
CC   ---------------------------------------------------------------------

CC   -!- FUNCTION: Eukaryotic CPN10 homolog which is essential for
CC       mitochondrial protein biogenesis, together with CPN60. Binds to
CC       CPN60 in the presence of Mg-ATP and suppresses the ATPase activity
CC       of the latter (By similarity).
CC   -!- SUBUNIT: Homohexamer (By similarity).
CC   -!- SUBCELLULAR LOCATION: Mitochondrial matrix.
CC   -!- SIMILARITY: Belongs to the groES chaperonin family.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
